## THE STANDING AIDS THAT HELP YOU AS YOU STAND UP

These standing aids have a support structure that accompanies the user throughout the standing sequence.

Standing up becomes a lot easier for users with poor motor control.

### Easy tool-free adjustment

The aid is suitable for users who are 140 to 200 cm tall and weighing up to 140 kg.

The model shown is code AV 14 2420

#### FOR EASIER ACCESSIBILITY:

<1> Access to the aid is made easier and safer by the alignment of the seat with the original seating position. When transferring from the wheelchair to the standing aid, the seat, unlike the old model, can always remain horizontal and align to the user's seating level by adjusting the aid height.

<2> The sliding footplates, which are independent and adjustable in depth, reduce the distance between the person in the wheelchair — or sitting — and the base of the structure. This helps transfer the user's feet onto the standing aid. The footplates can be adjusted even when the user is on them.

#### 1 - ADJUSTING THE STRUCTURE IN HEIGHT:

the support structure adapts to the user's height easily and with no effort as it is operated electrically or by gas spring. Adjustment can also be made by the user in a quick and easy way, with no need for external help even when they are already standing. The knee, lateral and trunk supports are adjusted accordingly, for greater safety and comfort of the user.

**AV 14 2320 EASY UP 2320**  
gas spring height adjustment,  
electric lift

**AV 14 2420 EASY UP 2420**  
electric height adjustment,
