

# CLAVIA STRETCHER BED

Our primary objective is your *satisfaction*. Our *requirements* are as exacting as we would expect as a customer.

By supporting you from defining the product and throughout its life, we guarantee *high-performance* products, and a *responsive* and *high-quality service*.

We try, with humility, to *understand* your *use*, your *constraints* and to redefine the circuit of your patients to *improve* your *working conditions* and the *efficiency* of your *organization*.

We base our relationships on *shared trust*, making it our priority to be by your side for the *long term*.

# UNDERSTAND YOUR USE, YOUR CONSTRAINTS

## An essential component of day care & day surgery

From the surgery version to the chemotherapy version, CLAVIA replaces the bed in outpatient wards and day hospitals. Opt for the CLAVIA LSA SURGERY interchangeable surgical headrests, gutter armrests and the comfortable CLAVIA FCD trim, or the compactness and flexibility of the CLAVIA LSA.

## Mobility

This very compact stretcher bed is fitted with a 5th directional wheel and diameter 150 mm double running wheels. Intuitive and easy steering requiring considerably reduced pushing efforts. No matter the weight, the chair is light and easy to handle.

## Reliability

Our products, submitted to the LCIE Bureau Veritas laboratory, have been CE certified. They conform to ISO 14971, EN 60601-1, EN 60601-1-2 and EN 60601-1-6 standards. They are tested and secure. [Find out more](#)

## Retractable handles

Their ergonomic shape make pushing easy and comfortable. Made from ultra-strong plastic, they don't rust. Under the backrest, the patient is stretched in the Comfort Position.

## 3-position barriers

Ensuring patient safety when in the high position, they offer two low positions: the first is dedicated to transfers, the barriers completely disappear under the lying surface. The second is devoted to surgical procedures, the patient's chest is free and the surgeon is free to move around.

## Stability

With its two columns, the reliability of the CLAVIA is such that it can be used in the operating theater. Tested according to standard 60601-1, its high stability is certified.

## All electric

From variable height to pre-programmed positions, the chair is electrically guided by its user. Offering comfort, autonomy and safety to the patient, in addition to being easy to use for the staff, it is quickly adopted by the day care department.

## Ultra comfort

One button on the remote control to reach zero gravity. Immediate feeling of well-being, the Ultra Comfort position balances the body's pressure on the bed.

# M O B I L I T Y

*Our chairs have been designed to make your daily life easier*

We understand that your time is precious. Each second counts. That is why our chair is so easy to use. Its fifth directional wheel makes it light and intuitive. Its compactness simplifies your movements. Its double runner wheels adapt to any floor or obstacle. Its push handles, placed under the backrest for more comfort, perfectly fit the shape of your hands. **Improving your working conditions is one of our priorities.**

*Guaranteeing the **safety** of your patients*

Patient safety is not optional. Our products have been tested to meet the EN 60601-1 standard: jamming, stability, maneuverability, braking efficiency, etc. The patient can safely be left alone. In an emergency, the Trendelenburg or Reverse Trendelenburg or CPR (cardiopulmonary resuscitation) positions can be reached within seconds.

# RELIABILITY

*High-quality components,  
Long-term use,  
A reduced environmental footprint*

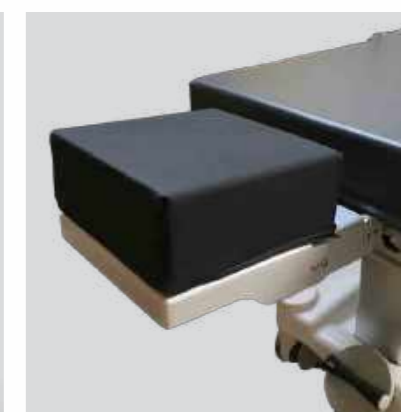

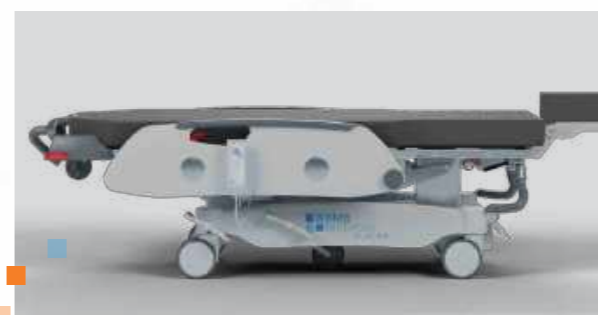

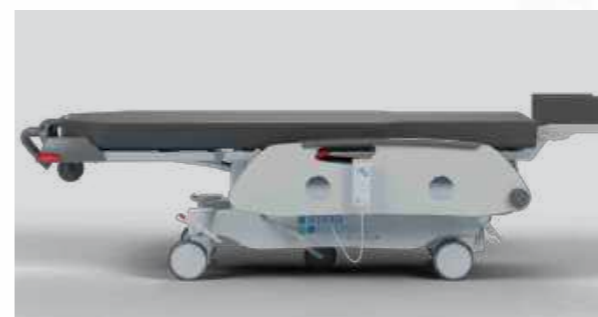

Our environmental awareness has led us towards an eco-friendly design. BMB MEDICAL is concerned about the ecological impact of its products at each stage of their life cycle. This commitment is reflected in actions on packaging, the "4R" policy (Reduce, Replace, Recycle, Rethink) and in our efforts on materials. Our products are designed and approved in accordance with standard IEC60601-1-9 that defines the requirements for eco-friendly design.

Our products are tested with constraints that are significantly higher than those it will be subjected to in daily use: 533 kg on the backrest, 924 kg on the lying surface, etc. Our columns are maintenance-free. Our sleeping surfaces are made from an extremely resistant and rot-proof material. Our corner protections are resistant to shocks and aging. **Choosing BMB MEDICAL is a guarantee of quality all while offering significant savings on your maintenance budget.**

## FOCUS ON DAY SURGERY

The CLAVIA LSA SURGERY has been **designed for day surgery** taking into account **the surgeon's comfort**. In the surgery position, the guards completely free the backrest, enabling the surgeon to operate **as close as possible to the patient**. They are placed at the **correct height** to avoid interference during endoscopy. The push bars retract to **leave the field free for the surgeon**. The foot pedal is used to **adjust the height of the chair**, even when in **sterile** clothing. The magnetic cushions and headrests are interchangeable depending on the type of procedure.

# DAY HOSPITAL

*Choose relaxation, choose CLAVIA*

More **compact**, but **as comfortable as a bed**, the fully electric CLAVIA FCD chair offers **rest and relaxation** to the patient. **Independent thanks to its remote control**, the patient can use pre-programmed positions to settle down before and during their treatment. By distributing body pressure evenly over the mattress, **the Ultra Comfort position** provides **immediate well-being**. The footrest can be adjusted to limit cramps. The **360° multi-directional armrest** conforms to the shape of the arm, follows the inclination of the backrest and is height-adjustable. It is replaced by **guards** for the FSP version.

## STRETCHER BED CLAVIA LSA SURGERY

**Compact,** it replaces a bed by optimizing space

**Ultra Comfort Position,** it reduces patient stress

**Mobile,** it is equipped with a 5th directional wheel and push bars under the backrest

**Stable,** it ensures patient safety

CLAVIA LSA SURGERY fits perfectly into the fast-track patient circuit, or directly into the day surgery unit.

From installation to the moment they leave the room, the patient no longer needs to be transferred. The procedure is performed directly on the chair.

Its remarkable mobility ensures good conditions of use for nursing staff.

CLAVIA LSA SURGERY is intended for ophthalmology, stomatology, ENT, hand surgery, colonoscopy, gastroscopy, etc.

CLAVIA KIDS is a specific paediatric stretcher bed for day care.

CLAVIA KIDS complies, with its specific side rails and paediatric kit at head-end, with the requirements from April, 26th, 2010 of the French Medical Safety Agency ANSM with regard to children under 146 cm.

Fully electric, CLAVIA KIDS enables everyday medical staff using. It permits space optimization by replacing medical bed in day care units.

Very comfortable and with a playful design, CLAVIA KIDS will bring psychological comfort to children.
